## SKILLS

### TECHNICAL

- Programming: Python, R, GitHub Copilot
- Data: SQL, Jupyter Notebooks, Tableau
- Cloud: AWS EC2, S3, RDS, EKS
- Deployment: GitHub Actions, Docker, Terraform, Kubernetes, Helm
- Azure DevOps, Jira, Confluence
- Salesforce Sales Cloud, Service Cloud, Marketing Cloud, Field Service
- PowerPoint, Excel, Word

### PROFESSIONAL

- Project management
- Knowledge management
- Strategy, planning, and analysis
- Continuous improvement
- Executive presentations

## PROFILE

Versatile catalyst with over 16 years of experience in driving value across several business and IT capabilities. Passionate about solving business problems through data-driven solutions that drive revenue, insight, and productivity, with both custom software and SaaS/PaaS. Possesses unique and diverse experience in software development, CRM, BI, financial analysis, revenue management, project management, and leadership that drives holistic and innovative thinking at the intersection of business and IT. Entrepreneurial, resourceful thinker-doer who loves to learn, elevate teams and businesses, and work with purpose.

## WORK EXPERIENCE

### BACK-END DEVELOPER

Shell | 2023 - Present

- Enhanced field development and planning app used by reservoir engineers to model and forecast oil and gas production for producing/declining wells
  - Refactored data flow and tuned model for decline curve analysis
  - Improved import/export of historical production data and decline curve model inputs
  - Added hierarchical filtering and improved usability of data visualizations for history and forecasts
- Improved functionality, reliability, security, code quality, test coverage, and automation for data science app used by geophysicists to optimize deep sea drilling ops, generating over \$10M in value/year
  - Developed endpoint to clean and load legacy files into database
  - Migrated CI/CD pipeline from Jenkins to GitHub Actions and added automated unit/integration testing, static application security testing (SAST) with Mend and static code analysis (SCA) with SonarQube
  - Performed cost analysis of AWS services revealing savings opportunities of \$100K-\$300K/year per environment

### CHIEF OF STAFF (CONTRACT)

Shell | 2021 - 2023

- Managed recruiting, continuous improvement, and community building for IT architecture for renewables division of Fortune 500 Oil & Gas company
- Consulted for enterprise onboarding and deployment of Jira and Atlassian for over 3,000 users and 10 instances
- Managed review of digital architecture for US and EU retail energy
- Contributed to subsurface wells scrum team as back-end engineer for CI/CD pipeline, testing, and security
